High Quality Materials:

Wall Cladding:

Russwood Thermally treated cladding (<https://www.russwood.co.uk/cladding/products/thermopine/>)
Thermopine® is a timber with enhanced stability and durability, produced by thermally modifying Scandinavian grown Scots Pine using only heat, steam and pressure. Less substrate movement means a paint coating can last up to three times longer than when applied to non-modified timbers, substantially reducing the maintenance requirement and in turn, the lifetime cost of the product. The advanced, highly controlled modification process results in a reduction of the wood's tendency to shrink and swell whilst reducing its vulnerability to wood destroying organisms

Wall Bricks:

To match existing elsewhere in the village

Glazing: Sky-Frame windows (<https://www.cotswoldwindows.co.uk/products/sky-frame/>).
A seamless solution - brings together advanced technical, architectural and spatial design to create unrivalled frameless glazing systems, with floor-to-ceiling glass, the slimmest mullions and open-corner options, the ultimate in indoor-outdoor glazing specification.

North Elevation 1:100

Adopting building form and composition that presents a more prudent solution. A reduced scale proposal where the mass has been broken up by the introduction of variation of height and form - minimising the impact and volume and offering structural simplicity that supports a neat design solution where renewables such as solar panels can be mounted hidden of sight.

Reference

Wall Bricks:

To match existing elsewhere in the village

Glazing: Sky-Frame windows (<https://www.cotswoldwindows.co.uk/products/sky-frame/>).

A seamless solution - brings together advanced technical, architectural and spatial design to create unrivalled frameless glazing systems, with floor-to-ceiling glass, the slimmest mullions and open-corner options, the ultimate in indoor-outdoor glazing specification.

West Elevation 1:100

The proposed design fully respects its context within the conservation area. The development replaces a large agricultural metal shed building. This sustainable contemporary approach continues the many examples of distinctive developments already present within the village. Bringing coherent identity that residents can identify with. High quality specification of materials will enhance the existing residential area (refer to specification)
