PLANNING CONSULTATION

Your observations are requested on the under noted planning application. I shall be glad to have your reply not later than 19th April 2022, If further time will be required for a reply please let me know. If no extension of time is requested and no reply is received by 19th April 2022, it will be assumed that you have no observations and a decision may be taken on the application.

Please remember to e-mail the DCConsultees Mailbox when you have inserted your reply into Idox.

Recommended Conditions

Unless otherwise agreed in writing and in advance by the Planning Authority, prior to any development commencing on site, a scheme will be submitted by the Developer (at their expense) to identify and assess potential contamination on site. No construction work shall commence until the scheme has been submitted to, and approved, by the Council, and is thereafter implemented in accordance with the scheme so approved.

The scheme shall be undertaken by a competent person or persons in accordance with the advice of relevant authoritative guidance including PAN 33 (2000) and BS10175:2011 or, in the event of these being superseded or supplemented, the most up-to-date version(s) of any subsequent revision(s) of, and/or supplement(s) to, these documents. This scheme should contain details of proposals to investigate and remediate potential contamination and must include:-

a) A desk study and development of a conceptual site model including (where necessary) a detailed site investigation strategy. The desk study and the scope and method of recommended further investigations shall be agreed with the Council **prior to** addressing parts b, c, d, and, e of this condition.

and thereafter

- b) Where required by the desk study, undertaking a detailed investigation of the nature and extent of contamination on site, and assessment of risk such contamination presents.
- c) Remedial Strategy (if required) to treat/remove contamination to ensure that the site is fit for its proposed use (this shall include a method statement, programme of works, and proposed validation plan).
- d) Submission of a Validation Report (should remedial action be required) by the developer which will validate and verify the completion of works to a satisfaction of the Council.
- e) Submission, if necessary, of monitoring statements at periods to be agreed with the Council for such time period as is considered appropriate by the Council.

Written confirmation from the Council, that the scheme has been implemented completed and (if appropriate), monitoring measures are satisfactorily in place, shall be required by the Developer before any development hereby approved commences. Where remedial measures are required as part of the development construction detail, commencement must be agreed in writing with the Council.

Reason: To ensure that the potential risks to human health, the water environment, property, and, ecological systems arising from any identified land contamination have been adequately addressed.

Dear Customer,

Land North And East Of Tweed Lodge, Hoebridge East Road, Gattonside, TD6

9LZ

Planning Ref: 22/00296/FUL Our Ref: DSCAS-0059634-WBB

Proposal: Erection of dwellinghouse

Please quote our reference in all future correspondence

Audit of Proposal

Scottish Water has no objection to this planning application; however, the applicant should be aware that this does not confirm that the proposed development can currently be serviced and would advise the following:

Water Capacity Assessment

Scottish Water has carried out a Capacity review and we can confirm the following:

▶ There is currently sufficient capacity in HOWDEN Water Treatment Works to service your development. However, please note that further investigations may be required to be carried out once a formal application has been submitted to us.

Waste Water Capacity Assessment

This proposed development will be serviced by MELROSE Waste Water Treatment Works. Unfortunately, Scottish Water is unable to confirm capacity currently so to allow us to fully appraise the proposals we suggest that the applicant completes a Pre-Development Enquiry (PDE) Form and submits it directly to Scottish Water via our Customer Portal or contact Development Services.

Please Note

The applicant should be aware that we are unable to reserve capacity at our water and/or waste water treatment works for their proposed development. Once a formal connection application is submitted to Scottish Water after full planning permission has been granted, we will review the availability of capacity at that time and advise the applicant accordingly.

Surface Water

For reasons of sustainability and to protect our customers from potential future sewer flooding, Scottish Water will not accept any surface water connections into our combined sewer system.

There may be limited exceptional circumstances where we would allow such a connection for brownfield sites only, however this will require significant justification from the customer taking account of various factors including legal, physical, and technical challenges.

In order to avoid costs and delays where a surface water discharge to our combined sewer system is anticipated, the developer should contact Scottish Water at the earliest opportunity with strong evidence to support the intended drainage plan prior to making a connection request. We will assess this evidence in a robust manner and provide a decision that reflects the best option from environmental and customer perspectives.

General notes:

- Scottish Water asset plans can be obtained from our appointed asset plan providers:
 - ▶ Site Investigation Services (UK) Ltd
 - ▶ Tel: 0333 123 1223
 - ► Email: sw@sisplan.co.uk
 - www.sisplan.co.uk
- Scottish Water's current minimum level of service for water pressure is 1.0 bar or 10m head at the customer's boundary internal outlet. Any property which cannot be adequately serviced from the available pressure may require private pumping arrangements to be installed, subject to compliance with Water Byelaws. If the developer wishes to enquire about Scottish Water's procedure for checking the water pressure in the area, then they should write to the Customer Connections department at the above address.
- If the connection to the public sewer and/or water main requires to be laid through land out-with public ownership, the developer must provide evidence of formal approval from the affected landowner(s) by way of a deed of servitude.
- Scottish Water may only vest new water or waste water infrastructure which is to be laid through land out with public ownership where a Deed of Servitude has been obtained in our favour by the developer.

- The developer should also be aware that Scottish Water requires land title to the area of land where a pumping station and/or SUDS proposed to vest in Scottish Water is constructed.
- Please find information on how to submit application to Scottish Water at <u>our Customer</u> Portal.

Next Steps:

All Proposed Developments

All proposed developments require to submit a Pre-Development Enquiry (PDE) Form to be submitted directly to Scottish Water via <u>our Customer Portal</u> prior to any formal Technical Application being submitted. This will allow us to fully appraise the proposals.

Where it is confirmed through the PDE process that mitigation works are necessary to support a development, the cost of these works is to be met by the developer, which Scottish Water can contribute towards through Reasonable Cost Contribution regulations.

▶ Non Domestic/Commercial Property:

Since the introduction of the Water Services (Scotland) Act 2005 in April 2008 the water industry in Scotland has opened to market competition for non-domestic customers. All Non-domestic Household customers now require a Licensed Provider to act on their behalf for new water and waste water connections. Further details can be obtained at www.scotlandontap.gov.uk

▶ Trade Effluent Discharge from Non Dom Property:

- Certain discharges from non-domestic premises may constitute a trade effluent in terms of the Sewerage (Scotland) Act 1968. Trade effluent arises from activities including; manufacturing, production and engineering; vehicle, plant and equipment washing, waste and leachate management. It covers both large and small premises, including activities such as car washing and launderettes. Activities not covered include hotels, caravan sites or restaurants.
- If you are in any doubt as to whether the discharge from your premises is likely to be trade effluent, please contact us on 0800 778 0778 or email TEQ@scottishwater.co.uk using the subject "Is this Trade Effluent?". Discharges that are deemed to be trade effluent need to apply separately for permission to discharge to the sewerage system. The forms and application guidance notes can be found <a href="https://example.com/here/beta-bases/
- Trade effluent must never be discharged into surface water drainage systems as these are solely for draining rainfall run off.
- For food services establishments, Scottish Water recommends a suitably sized grease trap is fitted within the food preparation areas, so the development

- complies with Standard 3.7 a) of the Building Standards Technical Handbook and for best management and housekeeping practices to be followed which prevent food waste, fat oil and grease from being disposed into sinks and drains.
- ▶ The Waste (Scotland) Regulations which require all non-rural food businesses, producing more than 50kg of food waste per week, to segregate that waste for separate collection. The regulations also ban the use of food waste disposal units that dispose of food waste to the public sewer. Further information can be found at www.resourceefficientscotland.com

I trust the above is acceptable however if you require any further information regarding this matter please contact me on **0800 389 0379** or via the e-mail address below or at <u>planningconsultations@scottishwater.co.uk</u>.

Yours sincerely,

Pamela Strachan
Development Services Analyst

Planning Application Reference	22/00296/FUL	Case Officer: JH				
Proposed Development	Erection of dwellinghouse					
Site Location	Land north and east of Tweed Lodge,	Hoebridge East Road, Gattonside				
The following observations represent the comments of the consultee on the submitted application as they relate to the area of expertise of that consultee and on the basis of the information provided. A decision on the application can only be made after consideration of all relevant information, consultations and material considerations.						
Background and Site description	The site in question is located within the Gattonside Conservation Area, designated by the Scottish Borders Council for its special character and appearance. The long history of the settlement can be seen in its Medieval-influenced plan form, with principally 18 th and 19 th century core and larger villas set in landscapes. The relationship between the village and its natural setting is notable, and this makes a positive contribution to the special character and appearance of the village. Within this context, the site in question was outside of the principal settlement until the latter part of the 19 th century, when the extant historic buildings around the site on the east of Hoebridge East Road were established, and the agricultural building formerly on this development site appears to post-date the 1919 OS survey of Roxburghshire, as its design and materials suggested. The nearby Hoebridge Inn is a positive contributor to the Conservation Area and potential non-designated heritage asset.					
Principal Issues (not exhaustive)	 The principal legislative and policy considerations from a heritage perspective in this case are; Section 64 of the Planning (Listed Buildings and Conservation Areas) (Scotland) Act 1997 requires that local planning authorities ensure that, "special attention shall be paid to the desirability of preserving or enhancing the character or appearance" of any buildings or other land in a conservation area in fulfilling its planning functions. One of the key outcomes for the planning system is to help protect and enhance our natural and cultural assets, and facilitating their sustainable use (Outcome 3, SPP). The siting and design of development should take account of all aspects of the historic environment (paragraph 140, SPP) Proposal for development within conservation areas and proposals outwith which will impact on its appearance, character or setting, should preserve or enhance the character and appearance of the conservation area (paragraph 143, SPP) Non-designated heritage assets are an important part of Scotland's heritage and irreplaceable resources. These should be protected and preserved where significant as par as possible and in situ wherever feasible (paragraph 151, SPP). 					

- Historic Environment Policy for Scotland sets out a series of principles and policies for the recognition, care and sustainable management of the historic environment. Relevant policies include:
 - HEP4: Changes to specific assets and their context should be managed in a way that protects the historic environment.
 Opportunities for enhancement should be identified where appropriate. If detrimental impact on the historic environment is unavoidable, it should be minimised. Steps should be taken to demonstrate that alternatives have been explored, and mitigation measures should be put in place.
- The Council will support development proposals within or adjacent to a
 Conservation Area which are located and designed to preserve or
 enhance the special architectural or historic character and appearance of
 the Conservation Area. This should accord with the scale, proportions,
 alignment, density, materials, and boundary treatment of nearby
 buildings, open spaces, vistas, gardens and landscapes (Policy EP9).

Therefore, the principal consideration(s) from a heritage perspective from this case are:

- Whether the proposed works would preserve or enhance the historic character and appearance of the Conservation Area
- The impact on the Hoebridge as a positive contributor to the conservation area and potential non-designated heritage asset.

•

Assessment

GENERAL

- The proposed development site is very visible from the B6360 road on the approach to the village from the east. There are also likely viewpoints from the river, albeit likely glimpsed between hedges. This, and its location within the conservation area, require a high quality design to be brought forward which responds to its specific location. The use of high quality materials and detailing will be paramount.
- Whilst there are some flat-roofed late 20th century / contemporary developments in the conservation area (notably The Rig), these are generally of one storey and integrated with their landscape. They are generally less prominent than the proposed.
- The information provided in this application is limited in detail. Elevations
 are only shown within the design document and no full proposed site plan
 with landscaping is provided. Sufficient information is required to
 demonstrate the quality of the proposal, its impact on the conservation
 area and its landscape setting.

BUILDING DESIGN

- A contemporary design is acceptable. The design is intended to recede in views due to its materials and dark colour, which is an appropriate approach. However there are concerns as to whether this would be achieved due to the below:
- The proposed development occupies a much greater footprint than that typical of the conservation area and that previously consented in principle for the site, and sits hard up against the development boundary.
- Although the drawings indicate the building height falls below ridge height of the neighbouring cottage, the walls rise above eaves height and the flat roofed form will result in a larger massing. It is unclear from the information provided how the building relates to the eaves and ridge height of the Hoebridge.

- The proposed footprint and massing will result in a large building which is prominent in the landscape. This is particularly apparent due to its two storey height combined with the length of the east elevation and the unrelieved parapet height.
- The scale of the building would appropriately be reduced.
- The single storey section helps break up the massing, however the perception of scale should be reduced through further breaking up the massing into smaller elements.
- Given the prominence of the site, and in order to break up the massing, it
 would also likely be appropriate for the form/roofscape of the building to
 respond to those characterising the conservation area which are
 predominantly pitched.
- There are some areas of unrelieved cladding. Further relief could also be provided through use of different materials which are prevalent in the conservation area such as stone.

LANDSCAPE INTEGRATION

- Limited detail and no definitive detailed landscape plan have been provided to demonstrate how the development will be integrated with the landscape. There are discrepancies between the schematic landscape diagrams provided.
- The building sits hard against the development area boundary and red line boundary of the proposal and therefore it is unclear if planting is proposed here (outside the red line?). The design, length and landscaping combined may result in a very prominent and unrelieved elevation.
- It is considered soft vegetative boundaries would be most appropriate for the site. Whilst there are tall boundary walls in the conservation area, these generally are associated with the historic roads and/or properties.
 This site does not have such a characteristic.

Comment Reasons:

Comment:I am excited to see another example of sensitive contemporary design in Gattonside! I grew up here and was really influenced by the exciting and varied ways of living provided by the likes of Peter Womersley's The Rigg and The Rig Office. I lived in a cottage next door and this side by side contrast opened my mind. It showed me that far beyond bricks and mortar there is not just one way of doing, being, or living. I retuned to live in Gattonside last year with my young family and was proud to see that this philosophy of diverse design has carried though in the likes of the flat roofed house near Abbotscroft, designed by AT architects and Orchard Lane. I applaud the local planning department for supporting this diverse approach to living and personally am excited to see this home come to life.

Comment Details

Commenter Type: Member of Public

Stance: Customer made comments in support of the Planning Application

Comment Reasons:

Comment:When we built our house in Gattonside, there were a number of comments that felt that our house did not fit in with the feel of the village. What we showed was a village full of contemporary designs, traditional buildings and a large number of variations of style. They all work together to present a location that prides itself on amazing architecture blended with rural landscaping.

This building proposed takes elements of houses already in existence, such as the rig office, the rig and orchard park and is well thought through and considered. It's design is spectacular in the use of the space and has a sense of beauty that will be concealed in its landscaping and environment.

Bringing another young family into the village will allow Gattonside to continue to thrive and maintain its community spirit and we believe buildings such as this, which are considerate and modern should be given more support by both the local communities and the council.

Our support is given on this application and we encourage more across the region. We hoe that the council and the community give this request the support that we received and have benefitted from joining the village.

Comment:Tweed Lodge Hoebridge Road East Gattonside TD6 9LZ

20 March 2022

Planning proposal 22/00296/FUL

We wish to object to the above planning proposal primarily on the grounds of loss of amenity for our property, specifically loss of light, loss of privacy and the overbearing impact of the proposed development.

We have no objection to the principle of a house being built on this plot. Indeed, we offered no objection when the indicative planning proposal was made by the previous owner of the land. That indicative proposal showed a single-storey garage immediately in front of our property Tweed

Lodge and a house sited in the far north-east corner of the plot. Our general acceptance of a house being built on the plot was also indicated to the owner of the plot at an informal consultation in 2021. However, we made clear that a two-storey structure immediately in front of our house would have a significant negative impact on the amenity of the property. It is disappointing therefore that the detailed proposal includes precisely such a structure.

As the closest property to the proposed development, Tweed Lodge is mentioned numerous times in the detailed design proposal but inadequate acknowledgement has been made of the impact on our property by this proposed development and inadequate measures taken to mitigate this impact.

Loss of light

If this development is considered as infill development, the Scottish Borders Local Development Plan (SBLDP) states on p31 that the property should not "result in any significant loss of daylight, sunlight or privacy to adjoining properties as a result of overshadowing or overlooking". The detailed design proposal shows an illustration of shadow cast by the proposed development at different times of the day. This shows the potential loss of sunlight caused by the proposed structure, and specifically the two-storey annexe, on Tweed Lodge, but the SBLDP places equal weight on the loss of daylight from a development. Even on an overcast day (the norm in this region), light at the front of our house will be limited, and especially given the proposal for the external cladding of the building to be black. The fence behind which the black two-storey annexe would stand is just 2.9 metres from the front of our front door porch. Point 3.4 of the Privacy and Sunlight guidance documentation that supplements the SBLDP states that the height of a new development should fall below a line drawn at a vertical angle of 25 from the centre of a window of an existing building. That would not be the case for this two-storey annexe.

We were told by the owner that the reason why a two-storey annexe structure was proposed in this position is that the upper storey would house a study and it was not possible to accommodate it elsewhere. However, other options could be considered for finding this space in a development of this size, or alternatively a separate single-storey office could be built elsewhere on the plot, as indeed we have done at Tweed Lodge in a way that has minimal impact on the amenity of our neighbours' properties, making it possible for the building directly in front of our house to be a single-storey one.

Loss of privacy

The proposed main building would be very close to our property, significantly closer than was shown on the indicative planning proposal. The rooms facing south would overlook our main kitchen and living room on the ground floor and into our children's bedrooms on the upper floor. Acceptable distances as specified in Section 2 of the SBLDP Privacy and Sunlight Guidance document, depending on the angles between windows, must be observed.

Appropriateness of the proposed design

The SBLDP states, on p25, with regard to Policy PMD2 and specifically Placemaking and Design, that "[the property should be] finished externally in materials, the colours and textures of which complement the highest quality of architecture in the locality", and that it should be "compatible with, and respects the character of the surrounding area, neighbouring uses, and neighbouring built form". If this development is considered as infill development, similar requirements obtain (p31): the property should respect "the scale, form, design, materials and density in context of its surroundings".

Specifically with regard to the colour of proposed developments, the Placemaking and Design guidance that supplements the SBLDP states that "the most important principle is to use colours which blend in with local traditions and surrounding buildings... Coloured finishes should be considered in the context of the building's wider setting - the impact of inappropriate colours can be far-reaching as part of the wider Borders visual character", "... the inappropriate use of colour and materials in new building in the Scottish Borders has eroded the subtle interplay of buildings in their landscape. In order to reflect the local character, the use of colour and materials should... be sensitive to the indigenous materials and hues of the surrounding landscape".

The proposed design for the structure features black cladding. Not only would this exacerbate the light issue mentioned above, it would also make for a very prominent building that will have a visual impact at odds with the existing built forms within the conservation village of Gattonside. It is certainly true, as stated in the proposal, that the village has a variety of styles of property, old and modern. The design proposal chooses to pick out some of the more modern houses and especially flat-roofed ones but none of these flat-roofed buildings are two-storey and in particular none of these are black. The document refers to an old black farm building on the other side of the Tweed and so not in the village and to a neighbour's black-painted gate. These examples cannot be said to constitute a precedent for a large black two-storey property in the conservation village. The choice of black cladding would also emphasize the prominence of the structure, given the relatively exposed location of the plot on the edge of the conservation village. This would be particularly true when entering the village from the east on the B6360 or when looking towards the village from the south. The design proposal states that the site would be "hidden behind an existing line of mature trees" but these sparse deciduous trees provide very little screening indeed when not in leaf.

The scale and massing of the proposed development are considerable. The SBLDP Placemaking and Design guidance states on p57 that "New buildings should be simple in form, relating to traditional building forms in the area" and that "The building size should be relative to its site and surrounding buildings. Larger houses need more space around them and would sit uncomfortably located directly next to a traditional single or storey and a half storey cottage". The proposed development is very large, covers a significant footprint, is two storeys high and would mass in an overbearing manner next to Tweed Lodge.

Waste water and situation in a flood plain

Policy IS9 on p127 of the SBLDP states that "septic tanks are regarded as a last resort and not encouraged" and that there should be direct connection to the sewerage system. This proposal includes a septic tank positioned outside the site (and village) boundary and hence runs counter to this policy. The Scottish Water consultation document that has been submitted also indicates that they cannot guarantee mains drainage and sewerage.

The site is situated in a flood plain with a high water table. There has been regular flooding of the Tweed into the adjoining fields in recent years and, given the effects of climate change, such flooding events will become more frequent and more extensive. It is of concern therefore that a new building could contribute to future flooding and appropriate risk assessment is required.

Comment Details

Commenter Type: Neighbour

Stance: Customer objects to the Planning Application

Comment Reasons:

- Contrary to Local Plan

- Designated Conservation Area

- Detrimental to environment
- Flood plain risk
- Health Issues
- Inadequate drainage
- Land affected
- Overlooking
- Privacy of neighbouring properties affec
- Water Supply

Comment: As immediate neighbours on the notification list we would like to comment and state our reasons for opposing this application.

A property of this size will use a large volume of water. Scottish Water clearly have concerns and cannot at this stage guarantee mains drainage and sewage. Soakaways and a septic tank will be needed. This could be problematic in an area with a high water table close to the river Tweed in an area that floods. In the 28 years we have lived in the property we have experienced frequent flooding close to our property. Any changes which may contribute to raising the water table are of serious concern and extremely worrying for us as neighbours on the flood plain. Reviewing the SEPA flood map of our area, the field to the east of this development is one of the areas at high risk for flooding.

Another consideration is the sheer volume and footprint of this proposed property and its close proximity to other properties; this is nothing like the size or position of the proposed property in the 2020 application mentioned in section 2.1 (Planning Compliance). It also has a much larger

footprint than the original barn on the site.

There have been issues for neighbours with cooking smells emitting from the extractor fan in the adjacent commercial kitchen next door to the proposed development. When the prevailing south westerly is blowing cooking smells tend to be carried away in the direction of the proposed development. With such a large building filling that area we are concerned that this will cause the extracted air to pool and cause further problems for the surrounding properties. This development could therefore have a detrimental effect on air quality for adjoining properties to the commercial kitchen. iThis needs to be assessed by environmental health.

Another major concern is the failure of this development to remain within the village boundary. Policy PMD4 makes it very clear that this should only be allowed under exceptional circumstances. This development fails to fulfil the exceptions outlined in the Scottish Borders council policy document. Allowing development outside the boundary also changes the use of prime agricultural land policy ED10 and invades the designated countryside around towns EP6 as clearly shown in the councils policy document and illustrated in Fig EP6a. Neither is this development a satisfactory infill development policy PMD5. Any infill development should not conflict with the established land use of the area. It clearly does. Any infill development should not overshadow an adjoining property which it also clearly does. Any infill should have adequate services and it is also clear that Scottish Water cannot provide these services. This very large house will produce large volumes of water which will enter land that already has a high water table.

In summary this development in its current form is not suitable for this area.

Comment Reasons: Comment:Dear Sirs

22/00296/FUL | Erection of dwelling house | Land North and East of Tweed Lodge Hoebridge East Road Gattonside Scottish Borders

We write to lend our support and encouragement to the above planning application.

As Gattonside residents of over 40 years, we were attracted to locate our business here because of the variety of housing stock, and for us personally, the opportunity to live in a contemporary light-filled building.

We continue to believe that this area needs to attract young families, whose future vision will have beneficial effects on housing design and add to the diversity of the community.

Strong ideas are always an asset in any area, demonstrating the forward-thinking nature of enlightened leaders.

Yours faithfully,

Hamish Carruthers MBE Professor Sheila-Mary Carruthers
